A diverse selection of 1,600 ready-to-ship SKUs, which all can be customized in size, design and wood species (appliques, corbels, island posts, legs, mantels, mouldings, mullion inserts, panels, etc.).

Why Choosing an Outsource Partner Makes Good Sense

Outsourcing wood components makes good sense. It can oftentimes save money and enables you to take advantage of other's design and production expertise, thereby saving on the personnel and capital expenditures that would otherwise be required if you were to produce the parts in-house.

If any of these thoughts run through your head, outsourcing is most likely the best decision you can make:

- ▶ I need to increase my productivity, quality, consistency and efficiency
- ▶ I'd like to expand my product offerings
- ▶ I have trouble training new employees
- ▶ I could get more sales if I just had the time
- ▶ Machinery costs too much
- ▶ It's hard to know exact job costs before starting

Typically used for furniture, cabinets, building materials and other decorative wood products, dimensioned wood products include: cut-to-size blanks, edge-glued panels, solid or laminated squares, mouldings, turnings, bendings, upholstered frame stock, interior trim, millwork, staircase parts and component parts for cabinets, such as cabinet doors, face frames, and drawer sides and fronts.

Specified by thickness, width, and length, dimension products are classified into three types: rough dimension, semi-machined dimension or fully mechanized dimension.

Rough dimension stock consists of blanks cut and ripped to specific sizes, normally rough surfaced two sides or more to a nominal size.

Semi-machined dimension is rough dimension parts carried one or more steps further in the manufacturing process, including: finish surfacing, moulding, turning, tenoning, flat sanding, edge or face gluing, equalizing, trimming, mitering, etc., but which will not make the product a completely machined part ready for assembly.

Fully machined dimension parts are completely machined with no additional work necessary prior to assembly. A final polish sanding operation may be required prior to finishing or painting.

What to ask before buying

The secret to buying dimension products is communication. Tell your dimension suppliers exactly how the part is going to be used in your finished product. Discuss tolerances, specifications, and quantities with your dimension suppliers. Ask them

for suggestions to improve lumber yields, production efficiencies, product quality and ways to reduce costs – especially material costs. Since material costs account for over half of the total cost of producing dimension, the use of lower grade materials and optional species can result in dramatic savings. Be sure to discuss alternative solutions to meet your needs.

Dimension buyers also should specify the minimum requirements possible in order to maximize the wood utilization and minimize their costs. To arrive at the most efficient cost, dimension buyers are encouraged to specify only those faces and tolerances necessary to produce a satisfactory wood component product suited to the end use. All too often, a higher grade of material is specified than is actually needed. When this happens, it means

the dimension purchaser is paying more than is necessary.

The WCMA publishes the *Rules and Specifications for Dimension and Woodwork rulebook* to serve as a useful guide for dimension & component manufacturers and buyers. It is intended to standardize the methods and procedures for specifying, purchasing, and designing these products. Contact the WCMA office for more information at www.wcma.com or 651-332-6332.

How to Find Supplier

The WCMA represents manufacturers of dimension and wood component products who can supply any component you might need for cabinetry, furniture, architectural millwork, closets, flooring, staircases, building materials, and decorative/

specialty wood products made from hardwoods, softwoods, and a variety of engineered wood materials.

The WCMA makes it easy for buyers to find WCMA members that can produce the wood component products they need. Beginning on page 9 of this guide is a list of WCMA members with their product offerings, location, and contact information.

Buyers can also take advantage of WCMA's trademarked "Member Match" program. This online database matches the buyer's needs with our members' production capabilities. Once you enter the parts you are looking for, a list of manufacturers that can produce those parts is generated so you can contact the manufacturers with your exact specifications. Just visit our website at www.wcma.com and click on "Source Guide" under "Manufacturers".

Study reveals component market trends

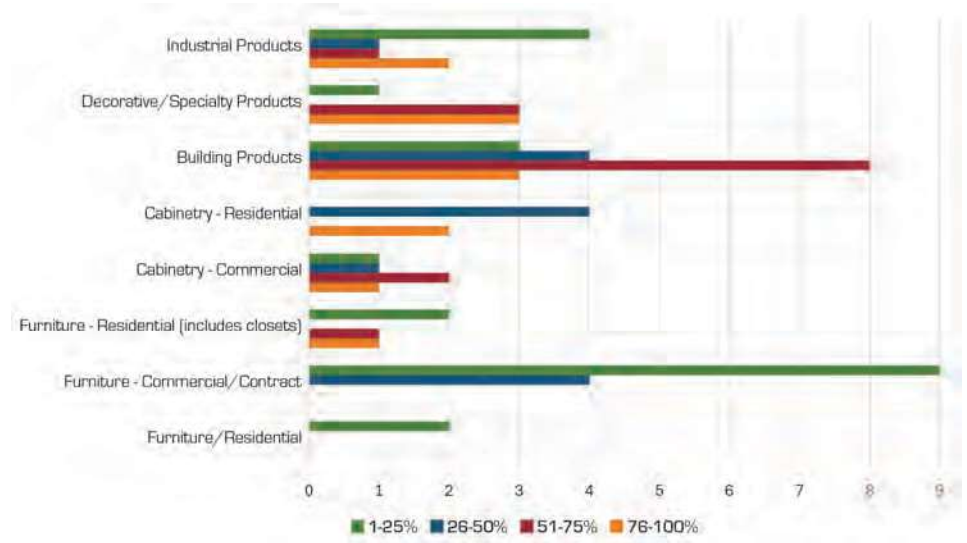

Overall, the wood products industry is looking good, with demand in cabinetry, furniture, retail fixtures and architectural millwork all projected to rise over the next few years. This also bodes well for the components and dimension manufacturers who supply products to these industries.

A recent survey of these manufacturers found more than half of the respondents supply products to the residential market, particularly in the cabinetry and furniture segments, with sales to commercial markets also strong, albeit to a lesser degree.

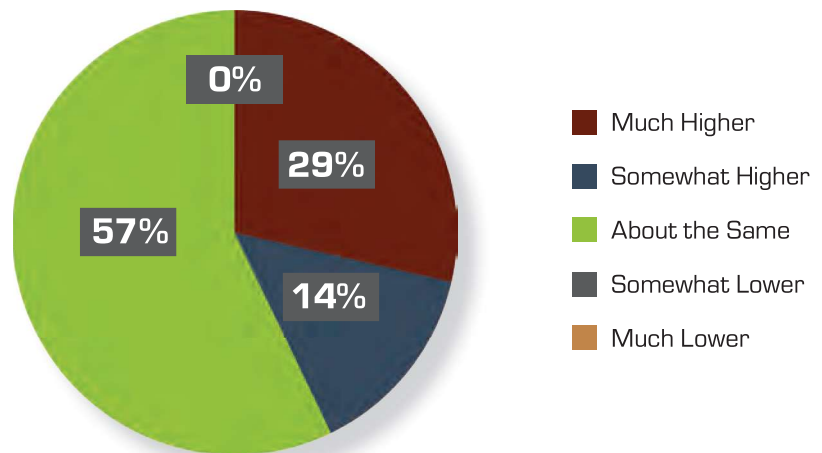

The Wood Components Benchmark Study was conducted online in the spring by the Wood Component Manufacturers Association, and the Wood Products Manufacturers Association. The survey provides insight into market sales, product categories, and business performance projections and other relevant information.

The residential market continues to be bolstered by new household formations and an aging population, demographics, and replacement and/or re-modeling of older homes. With survey participants able to select multiple industries, an estimated 20% indicated they provide products for residential cabinetry, compared to 15% for commercial cabinetry, while 18% targeted residential furniture and 40% contract furniture. Other top areas for wood components and dimension stock include: building products (33%), decorative/specialty items including musical instruments, caskets, toys, gifts and novelty items (21%), and industrial products, such as tool handles (24%).

What Markets are you Selling to?

What are your projections for 2024 sales compared to 2023?

Drilling deeper, when asked what percentage of overall sales were directly attributed to the individual segments, the average for those that selected residential cabinetry as well as residential furniture was 57% for both. Next highest was building products, with an average of

40%, followed by contract furniture (28%), commercial cabinetry (27%), decorative/specialty products (26%) and industrial products (24%).

In looking at the type of components provided, cabinetry, in general, is the number one selection. With

respondents able to choose multiple categories, an estimated 41% indicated they produce cabinet parts, while 35% specified solid wood cabinet doors and another 30% said cabinet doors made from composite panels. In alphabetical order, other products by category include: architectural millwork (40%), chair seats and parts (22%), closet components (25%) cut-to-size blanks (18%), dowels/round (7%), drawer boxes (28%), edge-glued panels (19%), entry doors/windows (14%), flooring (10%), moulding and trim (37%), RV parts (4%), specialty/novelty items (20%), squares/laminated (7%), squares/solid (7%), staircase parts (10%), store fixture components (15%), table parts (17%), tool handles and parts (2%), turnings (15%), upholstered frame stock (4%) and wall paneling (13%).

The primary species being used is Hard Maple, followed by White Oak, Poplar, Red Oak, Walnut and Soft Maple.

For more information about the Wood Components Benchmark Study or

the sponsoring associations, contact Wood Component Manufacturers Association at WCMA.com, and Wood Products Manufacturers Association at WPMA.org.

WCMA – How We Can Help You Succeed

If you are a manufacturer of wood components or dimension, membership in the Wood Component Manufacturers Association is now more important than ever. The WCMA is committed to becoming a progressive, nationally recognized association whose focus is meeting the needs of its members.

WCMA membership involves many things, but first and foremost, it provides access to a wide range of industry experts. Your colleagues are often your best source for in-depth insight and ideas. WCMA gives you the opportunity to connect with industry professionals across the United States and Canada, and members share openly, freely, and with great enthusiasm. In addition, the association offers the following to its members:

Networking Opportunities

The number one benefit of membership in the WCMA, according to our members, is the multitude of networking opportunities we offer throughout the year. We strive to offer our members the opportunity to network with other manufacturers across the nation in a non-competitive atmosphere through trade shows, on-line discussion forums, roundtable dinners, plant tours, and other social events. Many WCMA members also take advantage of the opportunities to do business with each other.

Conferences & Plant Tours

Fall Conference & Plant Tour Event

Each year, the WCMA hosts its flagship event, the Fall Conference and Plant Tour

Event. The Fall Conference presents an excellent opportunity for WCMA members and non-members to network and have open discussions on common concerns. Attendees also tour production facilities of several dimension, component, cabinet, furniture, millwork, and related woodworking companies. These plant tours provide attendees with a unique opportunity to observe innovative woodworking manufacturing operations and discover new techniques, exchange ideas, and learn about alternative manufacturing methods. Everyone comes away with at least one good idea that can be implemented in their own plants.

The networking opportunities also offer a chance to exchange information with seasoned counterparts. Held in the fall each year, this event enables members to conduct their own field research as well as gather a host of money-making, money-saving ideas.

The 2024 WCMA Fall Conference & Plant Tour Event will be held in the Cedar Rapids/Waterloo Iowa

Attendees toured nine plants at the 2023 WCMA Fall Plant Tour Event in Canton, OH. Pictured: A visit to Gerber Wood Products.

area in September. Tours of several outstanding woodworking operations are planned, including Kendrick Forest Products, Adams Architectural Millwork, Co., Trappist Caskets, Bertch Cabinet LLC, and others.

There will also be opportunities to connect with WCMA Tech Partners who provide machinery, equipment, supplies, software and other business solutions to WCMA members. A listing of WCMA Tech Partners is on page 13 of this Buyer's Guide. These companies are a great source for all your woodworking machinery, tooling, software and business solutions.

For more details about the Fall Conference and to register, please visit the WCMA website at www.wcma.com or email wcma@wcma.com.

European Plant Tour Event

The WCMA hosts European Plant Tour events to provide an opportunity for members to observe advanced woodworking and manufacturing facilities in Europe and observe leading-edge solutions to improve their quality and production methods. This is an excellent opportunity for attendees to discover "what's next" in the global woodworking industry, where trends come from, and gain insights into making their business more successful.

One attendee at the 2023 event said "I found the quality of the plant tours to be excellent. They offered a diverse view into the European philosophy of manufacturing by utilizing more automation and technology, replacing aging equipment quickly, and utilizing a wide range of wood composite materials. I saw levels of automation in action that I had often dreamt of but never believed were being applied in real woodshop applications. I left my week in Europe inspired and ready to apply aspects of what I learned in my own business."

Regional Plant Tour Event

The WCMA hosts Regional Plant Tour Events. These events focus on a specific region and are short enough that attendees only need to be out of the office for one or two days, yet still see advanced manufacturing plants. In May of 2024 we visited plants in the Auburn, Maine area and saw everything from fine furniture manufacturing to yacht building.

Other WCMA Member Benefits

Get New Business

Sales inquiries from component buyers are received by the WCMA office on a regular basis. The WCMA's Member Match™ Program is a system that provides prospective buyers with a list of all WCMA members who can produce the specific component products they need. The service is free of charge to component buyers and WCMA members and can be accessed on our website in the Source Guide area.

Thos. Moser clocks seen during the 2024 Spring Regional Plant Tour Event

Trade Promotion

The WCMA participates in several promotional programs for the purpose of promoting the products of our industry and generating more business for our members. Our promotional activities include: Exhibiting at trade shows, like

IVF, and highlighting the various products produced by WCMA member companies; participating in specialized woodworking industry events and seminars; and joining forces with other associations regarding important issues to our industry like the Real American Hardwood Coalition (RAHC), and the Wood Industry Resource Collaborative (WIRC)

Members' Website

The newly designed WCMA website, at www.WCMA.com features a simplified design, improved functionality and more content to keep members and visitors up-to-date on the latest news in the secondary wood manufacturing industry. The site is a resource where members can update their online profile, register for meetings, keep current on industry issues and initiatives, 'chat' with other members, and more! It is a comprehensive and easy to navigate site that serves as a one stop site for all the information you need on the industry including the WCMA Labor Relations Bulletin, Legislative News, Virginia Tech Housing Reports, and other important Industry News and Events.

Industry Standards

The WCMA establishes and maintains the "Rules and Specifications for Dimension and Woodwork". A necessary addition to any plant, the Rulebook covers dimension and component grading rules, tolerances, and claim procedures for domestic and export trade. It also serves as a guideline for buyers of dimension and component products when specifying their component products. The pocket-sized Rulebook is available for \$10.00 per copy to non-members, and is available free to members in the member section of the website, www.wcma.com.

WCMA Mission Statement & Objectives

The Wood Component Manufacturers Association advances and promotes the

interests of the North American wood products industry through interactive and innovative manufacturing solutions.

The Objectives of the WCMA are as follows:

- ▶ Promote a friendly exchange of ideas among those engaged in the dimension & component manufacturing business.
- ▶ Develop and promote a general demand for the industry's products and services.
- ▶ Collect and distribute useful economic and technical information concerning industry trends and developments.
- ▶ Serve as a business referral clearinghouse by responding to inquiries from dimension & component buyers and passing this information on to its members.
- ▶ Conduct seminars and meetings that will satisfy the educational needs of our members.
- ▶ Establish and maintain standard rules and specifications for the dimension & components industry.
- ▶ Cooperate with other wood product trade associations and appropriate government agencies to promote and protect the interests of the industry.

As a company in the wood components industry, one of the wisest investments you can make is membership in the WCMA. To take advantage of these many member benefits, please visit the website **today** and fill out the membership application. You can also contact the WCMA office with any questions.

WE MAKE WOOD WORK!

Hardwood Components, Quality Millwork & Custom Finishing

Many Resources. One Source.

The Wood Component Manufacturers Association is your One Source for Many Resources. The benefits of working with WCMA member companies are clear, manufacturers that outsource components are more profitable than those that don't, period. Outsourcing is most likely the best decision you can make.

With members located throughout the U.S and Canada, finding a supplier that can consistently produce quality components and be responsive to your needs is easier than ever before. Just visit the WCMA online Member Match/Source Guide program, or call the WCMA office, and get a list of WCMA member companies that will meet your exact requirements for dimension and component products, from hardwoods, softwoods, and engineered wood materials. It's that easy, give it a try today!

Are you a Component Manufacturer?

Join the WCMA and prosper! Take advantage of WCMA's many promotional, educational and research activities to grow your business. We can help wood component manufacturers find new markets and customers for the products you make. Join today at www.wcma.com.
